Project Earth Science Geoff Holt 2011
Project Earth Science: Astronomy, Revised 2nd Edition, involves students in activities that focus on Earth's position in our solar system. How do we measure astronomical distances? How can we look back in time as we gaze across vast distances in space? How would our planet be different without its particular atmosphere and distance to our star? What are the geometries among Earth, the Moon, and the Sun that yield lunar phases and seasons? Students explore these concepts and others in 11 teacher-tested activities.

Plastics in the Aquatic Environment - Part II
Friederike Stock 2021-10-26 This book reviews comprehensively the opportunities and responsibilities of science, society and politics to combat plastic pollution in marine and freshwaters. It provides insights on what information is needed, and from whom, and it outlines policies proposed by various institutions including OSPAR, HELCOM and the European Union. Plastic waste has become a global threat to the aquatic environment that does not stop at country borders. Meanwhile, there are many efforts in science, industry, commerce and governments to tackle the problem worldwide. School education, NGO public actions, voluntary trade reduction measures, governmental management options and governmental regulatory actions are part of the portfolio of efforts to deal with the problem. Together with the companion volume *Plastics in the Aquatic Environment - Part I: Current Status and Challenges*, it provides scientists, policymakers and environmental managers with essential reference information on how this problem is being solved, what challenges and barriers are expected and

how they can be overcome.

Handbook of Environmental Economics: Valuing environmental changes

Karl-Göran Mäler 2003 Much applied environmental economics is concerned with the valuation of changes in environmental quality. Obtaining reliable valuation estimates requires attention to theoretical and econometric issues that are often quite subtle. Volume 2 of the Handbook of Environmental Economics presents both the theory and the practice of environmental valuation. It synthesizes the vast literature that has accumulated since the publication of the Handbook of Natural Resource and Energy Economics two decades ago. It includes chapters on individual valuation methods written by researchers responsible for fundamental advances in those methods. It also includes cross-cutting chapters that deal with aspects of welfare theory, uncertainty, experimental methods, and public health that are pertinent to valuation. Throughout the volume, attention is paid to research and policy issues that arise not only in high-income countries, where most of the theory and econometrics that underlie applied valuation methods have been developed, but also in poorer parts of the world. The volume provides a state-of-the-art reference for scholars and practitioners alike.

Women in Water Quality Deborah Jean O'Bannon 2019-06-29 This volume captures the impact of women's research on the public health and environmental engineering profession. The volume is written as a scholarly text to demonstrate that women compete successfully in the field, dating back to 1873. Each authors' chapter includes a section on her contribution to the field and a biography written for a general audience. This volume also includes a significant representation of early women's contributions, highlighting their rich history in the profession. The book covers topics such as drinking water and health, biologically-active compounds, wastewater management, and biofilms. This volume should be of interest to academics, researchers, consulting engineering offices, and engineering societies while also inspiring young women to persist in STEM studies and aspire to academic careers. Features a blend of innovations and contributions made by women in water quality engineering, as well as their path to success, including challenges in their journeys Presents an opportunity to learn about the breadth and depth of the field of water quality Includes a history of women in water quality engineering as well as research in current issues such as urban water quality, biologically-active compounds, and biofilms

Business and Environmental Policy Michael E. Kraft 2007 It is well known that American

businesses make an effort to influence environmental policy by attempting to set the political agenda and to influence regulations and legislation. This book examines what is not so well known: the extent to which business succeeds in its policy interventions. In *Business and Environmental Policy*, a team of distinguished scholars systematically analyzes corporate influence at all stages of the policy process, focusing on the factors that determine the success or failure of business lobbying in Congress, state legislatures, local governments, federal and state agencies, and the courts. These experts consider whether business influence is effectively counterbalanced by the efforts of environmental groups, public opinion, and other forces. The book also examines the use of the media to influence public opinion--as in the battle over drilling in the Arctic National Wildlife Refuge--and corporations' efforts to sway elections by making campaign contributions. Because the book goes well beyond the existing literature--much of which is narrow, descriptive, and anecdotal--to provide broad-based empirical evidence of corporate influence on environmental policy, it makes an original and important contribution and is appropriate for a variety of undergraduate and graduate courses.

Mapping Biology Knowledge K. Fisher 2006-04-11 Mapping Biology Knowledge addresses two key topics in the context of biology, promoting meaningful learning and knowledge mapping as a strategy for achieving this goal. Meaning-making and meaning-building are examined from multiple perspectives throughout the book. In many biology courses, students become so mired in detail that they fail to grasp the big picture. Various strategies are proposed for helping instructors focus on the big picture, using the 'need to know' principle to decide the level of detail students must have in a given situation. The metacognitive tools described here serve as support systems for the mind, creating an arena in which learners can operate on ideas. They include concept maps, cluster maps, webs, semantic networks, and conceptual graphs. These tools, compared and contrasted in this book, are also useful for building and assessing students' content and cognitive skills. The expanding role of computers in mapping biology knowledge is also explored.

Mikroplastik im Wasserkreislauf Jekel, Martin 2020-11-03 Das interdisziplinäre Forschungsprojekt MiWa widmete sich grundlegenden Fragestellungen zur Analytik und Wirkung von Mikroplastik-Partikeln im Wasserkreislauf. Es wurden Methoden der Umweltprobennahme, der Probenaufbereitung und verschiedene Detektionsverfahren zur Charakterisierung und Quantifizierung von Mikroplastik intensiv untersucht, miteinander verglichen und weiterentwickelt. Öko- und humantoxikologische Untersuchungen dienen dem Zweck, die potenziell von Mikroplastik ausgehende Gefährdung für die aquatische Umwelt und den Menschen zu analysieren und zu bewerten. Eine Harmonisierung und Standardisierung von Methoden der Probennahme, Probenaufbereitung und Mikroplastik-Detektion sind trotz der erheblichen Fortschritte derzeit nur teilweise möglich. Die ökotoxikologischen Studien zeigen zwar die Aufnahme von Mikroplastik-Partikeln durch einige Organismen, jedoch konnte bisher keine schädigende Wirkung nachgewiesen werden. Dabei wurden für eine Auswahl aquatischer Modellspezies sowohl Szenarien direkter als auch indirekter Exposition innerhalb einer Nahrungskette betrachtet. Interaktionen mit menschlichen Modellzellen wurden bislang nur bei Mikroplastik-Partikeln mit Größen weit unterhalb von 1 µm (also Nanoplastik) beobachtet. Eine umfassende Bewertung ist bislang nicht möglich. The interdisciplinary research project MiWa focused on principle knowledge gaps of analytical detection and effects of microplastic in fresh water cycles. Methods for environmental sampling, sample preparation and different analytical identification and quantification were intensively investigated, compared and further developed. Toxicological studies were conducted to assess potential risks of

microplastic particles towards the environment and human health. Harmonization and standardization are still only partially possible despite various improvements. The eco-toxicological experiments confirmed the intake of microplastic particles by different organisms but no hazardous effects could be found. Both direct ingestions and indirect exposition within food webs were tested. Interactions with exemplary human cells were only observed for particle sizes far below 1 µm (thus nanoplastic). An assessment is currently only possible to a limited extent.
